

Aufgabe 3:

a) Freies Volumen Zylinder: $\frac{1}{4} r^2 \cdot \pi \cdot L$

Freies Kreissegment: $\frac{1}{2} r^2 (\varphi - \sin \varphi) \cdot L$

$$\cancel{\frac{1}{4} r^2 \cdot \pi \cdot L} = \cancel{\frac{1}{2} r^2} (\varphi - \sin \varphi) \cdot \cancel{L}$$

$$\Rightarrow \frac{1}{2} \pi = (\varphi - \sin(\varphi)) \Leftrightarrow \sin(\varphi) - \varphi = -\frac{1}{2} \pi$$

b) $\sin(\varphi) - \varphi = -0.5\pi$

$$\Rightarrow \sin(\varphi) + 0.5\pi = \varphi$$

$$|x_n - x_{n+1}| < 10^{-3}$$

n x_n

0 2.3

1 2.3165

2 2.3054

3 2.3129

4 2.3079

5 2.3112

6 2.30896

7 2.3105

8 2.3095

$$\varphi = 2.310 \approx \underline{\underline{132.353^\circ}}$$

c)
